INCUBATION CENTRE AT SVSIDS

The institute is a post-graduate dental school attached to a medical college and a full-service preclinical research centre capable of toxicology, product assessments, initial product development and exploratory small and large-mammal studies. In 2012, an 'Incubation Centre & Intellectual Property Cell', adhering initially to self-developed guidelines and later amended to conform to the National Intellectual Property Rights Policies, 2016 & 2019, was instituted. Standard operating procedures (SOPs) for conducting clinical trials with a view to promote commercialization in affiliated institutions were developed.

Between 2014-19, 440 clinical trials (258 dissertations and 182 independent studies) were done in the institution and most were institutional or self-financed phase II trials on human subjects meeting regulatory standards for ethical research and evaluating novel products, tests or devices. From these trials, three products were identified as having potential for actual commercialization and the institute is actively pursuing the same.
